Information, Communication, and Space Technology

Mohammad Razani

Information, Communication, and Space Technology Mohammad Razani

Many books have covered the rapidly evolving fields of *information and communication technology* (ICT) and *space technology* separately. However, no single book has ever focused on how the integration of these two areas is creating a stronger platform for various scientific advancements—including some research work that cannot be performed on Earth.

To fill the void, **Information, Communication, and Space Technology** provides a novel illustration of that connection. Dividing content into sections that cover ICT, existing and future space technologies, and satellites, the author demonstrates the individual and combined power of each of these parts of the overall system. He explores how the combination of concepts from each of these interrelated fields is creating massive potential for broader advances in areas such as robotics, communications, navigation, agriculture, health care, and nanotechnology. The book introduces particular potential innovations, including "rocket-less" spacecraft launches, and development of a global system to balance energy distribution by using satellites that would collect solar energy and transmit it via microwave beams to different locations around the world.

Equally useful to students and professionals, this work is a culmination of the domestic and international experience that the author has acquired throughout more than three decades as an instructor and researcher. Emphasizing the strong need to incorporate ICT and space technology into the general university curriculum, the book starts with basic explanations of key concepts and theories, building toward more concrete, application-oriented examples that reveal the importance and impact of new technologies. This includes coverage of how satellites transfer voice, video, and other data across continents, as well as techniques used to obtain very-high-resolution images from space for use in agricultural and environmental sciences. This timely work employs a logical, practically structured approach that will help readers to better understand existing and emerging ICT and space technologies, including the most recent developments and achievements in the field.

From reader reviews:

James Flynn:

Here thing why this particular Information, Communication, and Space Technology are different and trusted to be yours. First of all reading a book is good but it really depends in the content of it which is the content is as yummy as food or not. Information, Communication, and Space Technology giving you information deeper as different ways, you can find any e-book out there but there is no reserve that similar with Information, Communication, and Space Technology. It gives you thrill studying journey, its open up your personal eyes about the thing which happened in the world which is possibly can be happened around you. It is easy to bring everywhere like in recreation area, café, or even in your way home by train. For anyone who is having difficulties in bringing the published book maybe the form of Information, Communication, and Space Technology in e-book can be your option.

Herman Deans:

The reserve untitled Information, Communication, and Space Technology is the publication that recommended to you to see. You can see the quality of the guide content that will be shown to you. The language that author use to explained their ideas are easily to understand. The article writer was did a lot of analysis when write the book, and so the information that they share to you personally is absolutely accurate. You also might get the e-book of Information, Communication, and Space Technology from the publisher to make you considerably more enjoy free time.

Theresa Walker:

Spent a free time and energy to be fun activity to accomplish! A lot of people spent their leisure time with their family, or their friends. Usually they carrying out activity like watching television, likely to beach, or picnic within the park. They actually doing same task every week. Do you feel it? Would you like to something different to fill your free time/ holiday? Could possibly be reading a book may be option to fill your cost-free time/ holiday. The first thing that you will ask may be what kinds of e-book that you should read. If you want to attempt look for book, may be the guide untitled Information, Communication, and Space Technology can be excellent book to read. May be it is usually best activity to you.

Dorothy Vinson:

Reading can called head hangout, why? Because when you find yourself reading a book specially book entitled Information, Communication, and Space Technology the mind will drift away trough every dimension, wandering in each aspect that maybe not known for but surely can become your mind friends. Imaging every word written in a book then become one web form conclusion and explanation that maybe you never get previous to. The Information, Communication, and Space Technology giving you another experience more than blown away your head but also giving you useful facts for your better life in this era. So now let us demonstrate the relaxing pattern this is your body and mind will be pleased when you are

finished looking at it, like winning a casino game. Do you want to try this extraordinary spending spare time activity?
