Collaborations in Architecture and Engineering Clare Olsen, Sinead Mac Namara

Collaborations in Architecture and Engineering focuses on team-building and problem-solving between architects and engineers to prepare you for working together in practice. It provides an overview and foundation for interdisciplinary collaboration so that you can create innovative proposals for optimization, performance, and aesthetic goals. It also shows you how to solve real-world problems and how to engage creatively with technological challenges so that you can be a productive member of any team.

The authors, an architect and an engineer, share guidelines learned from their experiences and observations on how to insure productive communication, engage in interdisciplinary discussions, and establish common goals and values. Throughout the book are many case study examples of architect and engineer collaborations—such as those between SANAA and Mutsuro Sasaki, Foster + Partners and Buro Happold, Steven Holl and Guy Nordenson, and SHoP Architects and ARUP. The book also includes a discussion about integrated project delivery (IPD) contracts and administration, so you'll be ready for better integration.
