**Intelligent Spaces (Computer Communications and Networks)** Alan Steventon, Steve Wright

This book sets out a vision of 'intelligent spaces' and describes the progress that has been made towards realisation. The context for Intelligent Spaces (or iSpaces) is the world where ICT (Information and Communication Technology) and sensor systems disappear as they become embedded into physical objects and the spaces in which we live, work and play. The ultimate vision is that this embedded technology provides us with intelligent and contextually relevant support, augmenting our lives and experience of the physical world in a benign and non-intrusive manner. The ultimate vision is challenging, there are technical barriers, especially in the integration of complex systems and in the creation of intelligent software, as well as social and economic barriers. This book explores what is technically possible and what users will need for the future. Academic and industrial researchers in Computer Science, IT and Communications, as well as practitioners will find this key reading as it delivers practical and implementable current research.
