Mathematics for Physicists (Dover Books on Physics)

Philippe Dennery, André Krzywicki

Mathematics for Physicists (Dover Books on Physics) Philippe Dennery, André Krzywicki

"A fine example of how to present 'classical' physical mathematics." — *American Scientist*

Written for advanced undergraduate and graduate students, this volume provides a thorough background in the mathematics needed to understand today's more advanced topics in physics and engineering. Without sacrificing rigor, the authors develop the theoretical material at length, in a highly readable, and, wherever possible, in an intuitive manner. Each abstract idea is accompanied by a very simple, concrete example, showing the student that the abstraction is merely a generalization from easily understood specific cases. The notation used is always that of physicists. The more specialized subjects, treated as simply as possible, appear in small print; thus, it is easy to omit them entirely or to assign them to the more ambitious student. Among the topics covered are the theory of analytic functions, linear vector spaces and linear operators, orthogonal expansions (including Fourier series and transforms), theory of distributions, ordinary and partial differential equations and special functions: series solutions, Green's functions, eigenvalue problems, integral representations.

"An outstandingly complete collection of mathematical material of wide application in physics . . . invaluable to the reader intent on increasing his knowledge of the mathematical theories and techniques underlying physics." — *Applied Optics*

From reader reviews:

Lillian Carlucci:

Do you have favorite book? If you have, what is your favorite's book? Guide is very important thing for us to know everything in the world. Each book has different aim or perhaps goal; it means that publication has different type. Some people truly feel enjoy to spend their time and energy to read a book. They are reading whatever they consider because their hobby is usually reading a book. Think about the person who don't like studying a book? Sometime, person feel need book after they found difficult problem or even exercise. Well, probably you will require this Mathematics for Physicists (Dover Books on Physics).

Josephine McIntire:

With other case, little men and women like to read book Mathematics for Physicists (Dover Books on Physics). You can choose the best book if you want reading a book. So long as we know about how is important the book Mathematics for Physicists (Dover Books on Physics). You can add understanding and of course you can around the world by the book. Absolutely right, simply because from book you can realize everything! From your country right up until foreign or abroad you will end up known. About simple issue until wonderful thing you are able to know that. In this era, we are able to open a book or maybe searching by internet system. It is called e-book. You can utilize it when you feel bored to go to the library. Let's go through.

Robert Thompson:

Reading a publication tends to be new life style in this particular era globalization. With reading through you can get a lot of information which will give you benefit in your life. Along with book everyone in this world can certainly share their idea. Books can also inspire a lot of people. Lots of author can inspire all their reader with their story or maybe their experience. Not only situation that share in the publications. But also they write about the data about something that you need illustration. How to get the good score toefl, or how to teach your young ones, there are many kinds of book which exist now. The authors on this planet always try to improve their proficiency in writing, they also doing some investigation before they write to the book. One of them is this Mathematics for Physicists (Dover Books on Physics).

Debbie Allen:

Reading a book to become new life style in this calendar year; every people loves to study a book. When you read a book you can get a large amount of benefit. When you read ebooks, you can improve your knowledge, because book has a lot of information into it. The information that you will get depend on what types of book that you have read. If you need to get information about your review, you can read education books, but if you act like you want to entertain yourself look for a fiction books, such us novel, comics, along with soon. The Mathematics for Physicists (Dover Books on Physics) will give you a new experience in reading a book.
