Green's Functions with Applications, Second Edition (Advances in Applied Mathematics)

Dean G. Duffy

Green's Functions with Applications, Second Edition (Advances in Applied Mathematics) Dean G. Duffy

Since publication of the first edition over a decade ago, **Green's Functions with Applications** has provided applied scientists and engineers with a systematic approach to the various methods available for deriving a Green's function. This fully revised **Second Edition** retains the same purpose, but has been meticulously updated to reflect the current state of the art.

The book opens with necessary background information: a new chapter on the historical development of the Green's function, coverage of the Fourier and Laplace transforms, a discussion of the classical special functions of Bessel functions and Legendre polynomials, and a review of the Dirac delta function.

The text then presents Green's functions for each class of differential equation (ordinary differential, wave, heat, and Helmholtz equations) according to the number of spatial dimensions and the geometry of the domain. Detailing step-by-step methods for finding and computing Green's functions, each chapter contains a special section devoted to topics where Green's functions particularly are useful. For example, in the case of the wave equation, Green's functions are beneficial in describing diffraction and waves.

To aid readers in developing practical skills for finding Green's functions, worked examples, problem sets, and illustrations from acoustics, applied mechanics, antennas, and the stability of fluids and plasmas are featured throughout the text. A new chapter on numerical methods closes the book.

Included solutions and hundreds of references to the literature on the construction and use of Green's functions make **Green's Functions with Applications, Second Edition** a valuable sourcebook for practitioners as well as graduate students in the sciences and engineering.

From reader reviews:

Gemma Jackson:

In this 21st millennium, people become competitive in each way. By being competitive right now, people have to do something to make them survive, being in the middle of the crowded place and notice simply by surrounding. One thing that often many people have underestimated it for a while is reading. Sure, by reading a e-book your ability to survive improve then having chance to stand than other is high. For you personally who want to start reading a new book, we give you this Green's Functions with Applications, Second Edition (Advances in Applied Mathematics) book as basic and daily reading publication. Why, because this book is usually more than just a book.

Joanne Hall:

You can spend your free time to learn this book this book. This Green's Functions with Applications, Second Edition (Advances in Applied Mathematics) is simple bringing you can read it in the park, in the beach, train as well as soon. If you did not have much space to bring the printed book, you can buy the particular e-book. It is make you much easier to read it. You can save the actual book in your smart phone. Thus there are a lot of benefits that you will get when one buys this book.

Shawn Jones:

Is it you who having spare time after that spend it whole day simply by watching television programs or just resting on the bed? Do you need something new? This Green's Functions with Applications, Second Edition (Advances in Applied Mathematics) can be the respond to, oh how comes? It's a book you know. You are so out of date, spending your free time by reading in this fresh era is common not a nerd activity. So what these publications have than the others?

Stephanie Bush:

As a university student exactly feel bored in order to reading. If their teacher requested them to go to the library in order to make summary for some book, they are complained. Just little students that has reading's spirit or real their hobby. They just do what the instructor want, like asked to go to the library. They go to presently there but nothing reading very seriously. Any students feel that examining is not important, boring along with can't see colorful images on there. Yeah, it is to become complicated. Book is very important to suit your needs. As we know that on this era, many ways to get whatever we would like. Likewise word says, many ways to reach Chinese's country. So , this Green's Functions with Applications, Second Edition (Advances in Applied Mathematics) can make you experience more interested to read.
