Differential Equations: Linear, Nonlinear, Ordinary, Partial A. C. King, J. Billingham, S. R. Otto

Finding and interpreting the solutions of differential equations is a central and essential part of applied mathematics. This book aims to enable the reader to develop the required skills needed for a thorough understanding of the subject. The authors focus on the business of constructing solutions analytically, and interpreting their meaning, using rigorous analysis where needed. MATLAB is used extensively to illustrate the material. There are many worked examples based on interesting and unusual real world problems. A large selection of exercises is provided, including several lengthier projects, some of which involve the use of MATLAB. The coverage is broad, ranging from basic second-order ODEs and PDEs, through to techniques for nonlinear differential equations, chaos, asymptotics and control theory. This broad coverage, the authors' clear presentation and the fact that the book has been thoroughly class-tested will increase its attraction to undergraduates at each stage of their studies.

From reader reviews:

Carson McDonald:

As people who live in the modest era should be up-date about what going on or details even knowledge to make these people keep up with the era that is always change and move ahead. Some of you maybe can update themselves by examining books. It is a good choice for yourself but the problems coming to an individual is you don't know what kind you should start with. This Differential Equations: Linear, Nonlinear, Ordinary, Partial is our recommendation to help you keep up with the world. Why, because book serves what you want and wish in this era.

Jonah Masten:

Information is provisions for those to get better life, information nowadays can get by anyone on everywhere. The information can be a knowledge or any news even an issue. What people must be consider while those information which is in the former life are difficult to be find than now's taking seriously which one works to believe or which one the actual resource are convinced. If you receive the unstable resource then you obtain it as your main information you will have huge disadvantage for you. All of those possibilities will not happen inside you if you take Differential Equations: Linear, Nonlinear, Ordinary, Partial as the daily resource information.

John Harrison:

Reading a book tends to be new life style in this particular era globalization. With reading you can get a lot of information that will give you benefit in your life. Using book everyone in this world can certainly share their idea. Publications can also inspire a lot of people. A great deal of author can inspire all their reader with their story or even their experience. Not only the storyline that share in the guides. But also they write about the knowledge about something that you need instance. How to get the good score toefl, or how to teach your sons or daughters, there are many kinds of book that you can get now. The authors on earth always try to improve their skill in writing, they also doing some investigation before they write to their book. One of them is this Differential Equations: Linear, Nonlinear, Ordinary, Partial.

Michael Hale:

Does one one of the book lovers? If so, do you ever feeling doubt if you find yourself in the book store? Make an effort to pick one book that you just dont know the inside because don't assess book by its handle may doesn't work this is difficult job because you are scared that the inside maybe not because fantastic as in the outside appear likes. Maybe you answer is usually Differential Equations: Linear, Nonlinear, Ordinary, Partial why because the excellent cover that make you consider regarding the content will not disappoint you. The inside or content is usually fantastic as the outside or even cover. Your reading 6th sense will directly direct you to pick up this book.
