Fish Physiology: Fish Neuroendocrinology: 28

Fish Physiology: Fish Neuroendocrinology: 28

The study of fish neuroendocrinology has had a significant impact on our general understanding of the functional roles and evolution of a variety of neurochemical messengers and systems. Not only do fish possess unique neuroendocrine features, they have also been and remain an important vertebrate models for the discovery of new neuropeptides. In the last fifty years, neuroendocrinologists have documented a complex and seemingly infinite number of interactions between hormones and nerve structures. Gradually emerging from this knowledge is an understanding of the specific neurohormonal pathways and the messengers responsible for maintaining homeostasis in an aquatic environment and for regulating the functional systems that allow for the highly diverse life histories and reproductive tactics of fish

Despite its recent growth, breadth and unique attributes, there is no single text covering the discipline of fish neuroendocrinology. In fact, other than a few mammalian neuroendocrinology textbooks, there is a serious lack of texts in comparative neuroendocrinology. Currently, information on the anatomical organization and function of the various neuroendocrine systems in fish is only available in original research papers and reviews.

By providing a current and comprehensive volume that highlights the specific properties of fish neuroendocrinology, this book will go beyond being the only reference text for fish neuroendocrinologists and will also serve comparative physiologists, endocrinologists, neuroanatomists and behaviourists interested in understanding the reciprocal actions between the nervous and endocrine systems.

- * Highlights the specific properties of fish neuroendocrinology
- * Emphasises the range and variety of interactions between neurobiology and endocrinology
- * Discusses both anatomical and functional aspects of the Neuroendocrine system
- * Also serves comparative physiologists, endocrinologists, neuroanatomists and behaviourists interested in understanding the reciprocal actions between the nervous and endocrine systems

From reader reviews:

Rebecca Burks:

Reading can called head hangout, why? Because if you find yourself reading a book mainly book entitled Fish Physiology: Fish Neuroendocrinology: 28 your thoughts will drift away trough every dimension, wandering in each and every aspect that maybe unfamiliar for but surely can be your mind friends. Imaging every word written in a e-book then become one web form conclusion and explanation that maybe you never get prior to. The Fish Physiology: Fish Neuroendocrinology: 28 giving you an additional experience more than blown away your thoughts but also giving you useful facts for your better life with this era. So now let us present to you the relaxing pattern here is your body and mind are going to be pleased when you are finished reading through it, like winning a sport. Do you want to try this extraordinary wasting spare time activity?

Maureen Bonds:

Do you have something that you prefer such as book? The book lovers usually prefer to opt for book like comic, brief story and the biggest one is novel. Now, why not seeking Fish Physiology: Fish Neuroendocrinology: 28 that give your enjoyment preference will be satisfied by reading this book. Reading habit all over the world can be said as the method for people to know world far better then how they react in the direction of the world. It can't be claimed constantly that reading habit only for the geeky man or woman but for all of you who wants to become success person. So , for all of you who want to start examining as your good habit, you are able to pick Fish Physiology: Fish Neuroendocrinology: 28 become your starter.

Julie Harris:

Reading a book for being new life style in this 12 months; every people loves to go through a book. When you read a book you can get a lot of benefit. When you read guides, you can improve your knowledge, mainly because book has a lot of information upon it. The information that you will get depend on what sorts of book that you have read. In order to get information about your study, you can read education books, but if you act like you want to entertain yourself you can read a fiction books, these kinds of us novel, comics, and soon. The Fish Physiology: Fish Neuroendocrinology: 28 will give you a new experience in reading a book.

Alex Tipton:

A lot of e-book has printed but it differs from the others. You can get it by internet on social media. You can choose the best book for you, science, witty, novel, or whatever through searching from it. It is identified as of book Fish Physiology: Fish Neuroendocrinology: 28. You can include your knowledge by it. Without leaving behind the printed book, it might add your knowledge and make a person happier to read. It is most critical that, you must aware about e-book. It can bring you from one location to other place.
